Programme syllabus

Degree Programme in Information and Communication Technology
Civilingenjörsutbildning i informationsteknik
300.0 credits

Valid for students admitted to the education from autumn 14 (HT - Autumn term; VT - Spring term).

This is a translation of the Swedish, legally binding, programme syllabus.

Programme objectives

Thematically, the students should obtain basic disciplinary knowledge, skills and competencies during the first three years of the education in the core areas of information and communication technology: mathematics, electronics, computer, communication and software engineering. Under the final two years of the education, knowledge and skills are deepened within some subarea coinciding with a master's education at KTH or an Erasmus Mundus Master's programme where KTH participates.

In addition to the requirements of the Higher Education Ordinance the following apply:

Knowledge and understanding

To be awarded an engineering degree in informatics, the student should:

- be able to apply mathematics and basic natural sciences within information - and communication technology
- be able to analyze technical problems from a systems perspective with an overall view on technical systems and their life cycle from conception, design, implementation, possibly production, operation, maintenance and phasing-out.
- be able to follow and utilize the knowledge development within the field of technology.

For the international specialization applies also that a Master of Engineering that has followed it should be able to:

- follow and utilize the knowledge development within the field of technology on respective language (European languages: Spanish, German, French).
- follow and utilize the knowledge development within the field of technology on respective language at a general level (Chinese and Japanese).

Skills and abilities

To be awarded an engineering degree in informatics, the student should:

- within the area of information and communication technology be able to apply creative and critical working methods to formulate and explore problems with modern methods and tools
- be able to analyze technical problems from a systems perspective with an overall view on technical systems and their life cycle from conception, design, implementation, possibly production, operation, maintenance and phasing-out.
- be able to work with problem-solving that takes its starting point in the product or the need and functionality considering the individual's using the product and the technology interplay in the society.
- have skills of efficient oral and in written communication, in Swedish and English, with different target groups. Corresponding to what is required for an international career.
For the international specialization applies also that a Master of Engineering that has followed it should be able to:

- communicate efficient with colleagues on the language in question (European languages: Spanish, German, French)
- be able to work as an engineer in countries where the language is native (all languages)

**Ability to make judgements and adopt a standpoint**

For an engineering degree in informatics, the student should:

- appreciate that engineering problems are complex, often can be not well defined, and sometimes contain conflicting conditions
- by exercise and reflection have developed an ability to work efficient in groups of different compositions, nationalities and abilities. Reference to KTH's local Degree Ordinance

http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning

**Extent and content of the programme**

The education comprises five years and 300 credits.

The three first years are for first-cycle studies and the final two for second-cycle studies.

The final two years the student takes a specialization that coincides with a Master's programme. The selection of elective Master's programmes can be changed, as the KTH programmes offered on master's level may change. Easmus Mundus programmes where KTH participates can, after approval from the programme co-ordinator, also constitute a specialization. For Erasmus Mundus programmes there are no reserved/guaranteed seats. These programmes must be applied to in competition with other applicants. Currently, the following Master's programmes constitute possible specializations:

- Computer Science
- Embedded systems
- Industrial Management
- Communication Systems
- Machine Learning
- Media Technology
- Medical Engineering
- Human Computer Interaction
- Network Services and Systems
- Software Engineering of Distributed Systems
- Systems, Control and Robotics
- System-on-Chip Design
- Wireless Systems

Students can be qualified to follow other Master's programme within KTH. If a student wants to follow another Master's programme than those listed as possible specialisations, consultation should take place with the programme co-ordinator for the IT-programme.

KTH's policy is that first-cycle courses are taught in Swedish and that second-cycle studies are conducted in English. The majority of courses for second-cycle studies are consequently in English. Some courses for first-cycle studies can be in English dependent on the teachers.

**Eligibility and selection**

Entry requirements and admission take place according to KTH's admission regulations, see KTH's regulatory framework http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning
Implementation of the education

Structure of the education

The academic year division in semesters, periods etc. are described in KTH's regulatory framework http://intra.kth.se/regelverk/utbildning-forskning/allmant/1.27175

The first two years consists of compulsory conditionally elective courses. These are scheduled so that primarily two courses are read and completed in the same period.

School year three has two compulsory courses of which one is an advanced study project, that also can be used as degree project for a Bachelor of Science degree, and one conditionally elective course..

The courses in school year 1-3 should help the student to acquire a solid foundation of: mathematics/natural sciences, basic technological sciences and professional skills. In school year three the first elective courses are chosen and the choice of specialization for the second cycle is made.

The guiding principle for specializations on the IT-programme is to make use of KTH's Master's programmes in the following way as far as possible:

The courses of the Master's programme are read in school year 4 and 5

Possible pre-requisites for respective Master's programmes are read in school year 3, compulsory courses on the Master's programme become compulsory courses for students on the IT-programme

Some courses can be excluded if they overlap with compulsory courses on the IT-programme. Apart from a degree project, at least 60 HE credits should come from second-cycle courses from the Master which fall within the field of technology of the IT-programme.

A course in Theory of Science/Research Methodology equivalent to II2202 Research Methodology and Scientific Writing is mandatory.

Foreign languages

Within the IT-programme it is possible to study language courses in parallel with other courses. For students selecting this possibility it is recommended that the student study abroad for an exchange period during year 4 or 5 in a country where the language in question is spoken and is used as language of instruction at the receiving university. Students are also recommended to study one semester abroad during year 3. Students are not allowed to start their language courses until they have proven their ability to follow the mandatory and conditionally elective courses in year 1, i.e. the language courses normally can be elected from year 2. Students may take an elective realia course on 4.5 HE in year 1.

For the European languages it is recommended that the language courses are distributed as 7.5 + 7.5 HE credits in years 2 and 3 and an additional 7.5 + 7.5 HE credits during year 4 and 5. The degree project can be performed abroad or in Sweden. The examiner should be an authorized teacher at KTH.

Students studying foreign languages are strongly recommended to select one of the master programmes that do not require any additional pre-requisite courses as specialization for year 4 and 5. This allows the language courses to be included entirely within the 300 HE credits required for a degree.

Courses

The programme is course-based. Lists of courses are included in appendix 1.
The programme is course-based. Lists of courses are included in appendix 1. Courses are either compulsory, conditionally elective or elective. For year 1-3 there are two sets of conditionally elective courses labeled “MatNat block” and “IT block”. For a degree it is required that at least 31.5 HE credits of courses from the “MatNat block” and 52.5 HE credits of courses from the “IT block” has been completed.

It is recommended that the space for elective courses within the programme is used to study pre-requisite courses for the selected Master in case there are such requirements. Pre-requisite courses for the Master programmes are listed in appendix 1.

**Grading system**

Courses in the first and the second cycle are graded on a scale from A to F. A-E are passing grades, A is the highest grade. The grades pass (P) and fail (F) are used for courses under certain circumstances.

**Conditions for participation in the programme**

Registration for studies (Studieanmälan) should be made by all the students that intend to study the following semester. This application constitutes a basis for semester registration and basis for decision about promotion to the following semester. The registration for studies for the autumn semester is made no later than May 15 and for the spring semester no later than November 15. Course choice is made normally in connection with the registration for studies.

The rules for promotion to the next school year for the IT-programme are:

- From school year 1 to school year 2 - 45 HE credits passed from school year 1.
- From school year 2 to school year 3 - 90 HE credits passed from school year 1 and 2, of which at least 50 HE credits from school year 1.
- From school year 3 to school year - 150 HE credits passed from school year 1, 2 and 3, of which at least 110 HE credits from school year 1 and 2. The advanced study project course of 15 HE credits must be completed.

Choice of Master's programme takes place before school year 4.

**Recognition of previous academic studies**

Student that has read some/some courses at another university or higher education institution can apply to transfer the credits the IT-programme. The transferred courses may not overlap with any course already read at KTH.

To exchange a compulsory course, documented knowledge of at least the same extent for the equivalent subject must be demonstrated.

Application documents for transfer or change of courses should be delivered to the study adviser for assessment and decision by the programme co-ordinator of the IT-programme. To the application should be enclosed attested copies of academic transcripts for invoked courses and course descriptions (course syllabus). Decisions for such applications are normally available within a couple of weeks from the date of the application. A copy of the decision is always mailed to the applicant.

Reference to the policy that is in KTHs regulatory framework http://intra.kth.se/regelverk/utbildning--forskning/grundutbildning

**Studies abroad**

To be qualified for exchange studies within the scope of the agreements that have with select foreign universities the following apply:

- Students in school year 2 may not have more than two courses unfinished
- Students in school year 3 may not have more than three courses unfinished

The KTH student selection criteria apply. Reference to the selection criteria in KTH's regulatory framework http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning
**Degree project**

For engineering degree, a degree project of 30 HE credits within the field of technology should be carried out. The degree project is normally carried out at the end of the education and cannot be started, until the student has achieved at least 240 HE credits within the education. The degree project should be carried out within the chosen Master's programme.

The selection of a suitable degree project is made in consultation with the examiner.

The degree project is graded from A-F where the grades A-E are passing grades. To pass, the work should be assessed to pass all three grading criteria: process, technically/scientific content and presentation.

Reference to KTHs regulatory framework [http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning](http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning)

**Degree**

The conditions for higher education qualification are satisfied, in that the course requirements in the program are satisfied.

The description of the higher education qualification is Engineering degree. In the degree certificate, the study programme that the student has gone through is stated. The application for higher education qualification is made through the personal menu at www.kth.se. Reference to KTHs regulatory framework [http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning](http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning)

Supplementary information

The conditionally elective courses are to be treated as mandatory courses. Due to pre-requisites for the mandatory courses the only real options for selecting courses in year 1-3 are the following:

- ME1003 Industrial Economics can be replaced by a language course (N.B. ME1003 is pre-requisite for some master programmes).
- If the student is targeting a more hardware/physics oriented master programme it is recommended to take SF1670 Calculus in Several Variable II (or SF1626). If the student is targeting a more software master programme one can select DD1350 Logic for Computer Science (requires some knowledge of Prolog equivalent to ID1213 Logic Programming).

The application for degree is reviewed according to the study programme.

Language Courses

The language courses offered by KTH in chinese, japanese, german, french, spanish and brasilian portugese can be selected as elective courses. Information about the language courses can be found at www.kth.se/language.

**Supplementary information**

Degree project 15 hp first level is compulsory during the spring term.

The conditionally elective courses are to be treated as mandatory courses. Due to pre-requisites for the mandatory courses the only real options for selecting courses in year 1-3 are the following:

- ME1003 Industrial Economics can be replaced by a language course (N.B. ME1003 is pre-requisite for some master programmes).
- If the student is targeting a more hardware/physics oriented master programme it is recommended to take SF1670 Calculus in Several Variable II (or SF1626). If the student is targeting a more software master programme one can select DD1350 Logic for Computer Science (requires some knowledge of Prolog equivalent to ID1213 Logic Programming).

The application for degree is reviewed according to the study programme.

**Language Courses**

The language courses offered by KTH in chinese, japanese, german, french, spanish and brasilian portugese can be selected as elective courses. Information about the language courses can be found at www.kth.se/language.
Year 4

Supplementary information

Komplettterande information årskurs 4-5:

Årskurs 4-5 på civilingenjörsprogrammets inriktningar motsvarar årskurs 1-2 på ett masterprogram. För detaljinformation om masterprogrammen och ingående kurser se respektive masterprogramns beskrivning på KTHs webb http://www.kth.se/utbildning/program/master-magisterutbildning.

Masterprogrammen omfattar 120 högskolepoäng. Av dessa är 30 hp för examensarbetet och 90 hp kurser. Civilingenjörsstudenter skall läsa minst 60 hp teknikkurser på avancerad nivå av master programmets kurser inklusive en kurs i forskningsmetodik (t.ex. II2202) för att kunna räkna det till inriktningen. OBS! Endast en kurs i forskningsmetodik kan ingå i examen.

För att få läsa Industriell ekonomi (TINEM) som inriktning gäller följande (för att examensordning och högskoleförordningens krav för examen skall uppfyllas):

- minst 60 hp kurser inom TINEM måste läsas.
- minst 30 hp teknikkurser ur ett annat masterprogram som utgör inriktning för CINTE måste läsas.
- Exjobbet på avancerad nivå måste vara kvalificerat både som exjobb på TINEM och som exjobb inom CINTEs teknikområde.
- Examensarbetet och valet av teknikkurser skall, i fallet att vald master är TINEM, godkännas innan de påbörjas av både programansvarig för TINEM och för CINTE. Detta görs i en så kallad individuell studieplanering.

För varje masterprogram baseras de behörighetsgivande kurserna på antagandet att studenten läst samtliga obligatoriska kurser i årskurs 1-3 samt följande villkorligt valfria kurser:

"IT blocket":

- Samtliga kurser förutom II1310 introduktionskurs i datateknik.

"MatNat blocket":

- SF1624 Algebra och geometri
- SF1625 Envariabelanalys
- SF1626 Flervariabelanalys
- IF1613 Elektromagnetism och vågrörelselära.

För närvarande mappas följande masterprogram för CINTE:

- Datalogi/Scientific Computing
- ICT Innovation (OBS! Ansökningsperiod 5 februari - 1 april), utan garantiplats.
- Inbyggda system/Embedded Systems
- Industriell ekonomi/Industrial Management
- Kommunikationssystem/Communication Systems
- Maskinlärning/Machine Learning
- Medicinsk teknik/Medical Engineering
- Medieteknik/Media Technology
- Människa-datorinteraktion/Human-Computer Interaction
- Nätverkstjänster och system/Network Services and Systems
- Programvaruteknik för distribuerade system/Software Engineering of Distributed Systems
- Trådlösa system/Wireless Systems
