Degree Programme in Chemical Engineering 180 credits

Högskoleingenjörsutbildning i kemiteknik

Valid for students admitted to the education from autumn 20 (HT - Autumn term; VT - Spring term).

This is a translation of the Swedish, legally binding, programme syllabus.

Programme objectives

The Bachelor of Science programme in Chemical Engineering educates students for work on a wide range of chemical and chemical engineering activities.

The study programme has a theoretical and applied profile and the graduates will be able to use and develop new technologies in the chemical and chemical engineering field.

The study programme also aims to provide the students with knowledge about how the technology affects society with respect to the human situation and needs, and goals of society for economic, social and ecologically sustainable development.

In order to comply with the acceleration of technical progress and the changes this brings, the students should have the ability to understand the new technical areas. The student should also be given a good background for continued personal development and life-long learning both within their own focus area and within new subject areas.

The following programme objectives are from the Higher Education Ordinance for a Bachelor of Science in Engineering. They are complemented with additions and clarifications for the Chemical Engineering programme.

Knowledge and understanding

- demonstrate knowledge of the disciplinary foundation of the engineering field chosen and best practice in this field as well as awareness of current research and development work

- knowledge of physical and chemical processes, different forms of energy and its transformation and the importance of chemical, thermodynamic and kinetic aspects of chemical reaction and process routes
- knowledge of Swedish and international chemical industry

- demonstrate broad knowledge in the engineering field chosen and relevant knowledge of mathematics and the natural sciences

- knowledge of chemical and chemical engineering methods and systems

Skills and abilities

- demonstrate the ability to identify, formulate and deal with issues autonomously and creatively and to analyse and evaluate technological solutions

- from a complex situation to formulate and organize a task
- to find an appropriate solution to a technical problem
- to compare and evaluate alternative solutions
- assess the reasonableness of the obtained solutions

- demonstrate the ability to plan and using appropriate methods undertake tasks within predetermined parameters

- to solve technical problems with adequate methods
- show good laboratory skills and knowledge on safe handling of chemicals
- have the ability to plan, carry out and evaluate experiments in laboratory scale and in larger scale

-demonstrate the ability to use knowledge critically and systematically to model, simulate, predict and evaluate series of events on the basis of relevant information

- show ability to search and critically examine information
- display skill to make use of computer tools for calculation and information retrieval
- define and combine equations to model natural and technical systems

- demonstrate the ability to design and manage products, processes and systems while taking into account the circumstances and needs of individuals and the targets for economically, socially and ecologically sustainable development set by the community

- on the basis of knowledge of chemistry and chemical engineering evaluate a business or product's environmental impact
- select and develop measures to eliminate or limit the harmful effects of an activity or a product
- assess and evaluate technical solutions from the economic and social perspective

- demonstrate the capacity for teamwork and collaboration with various constellations

- to work efficiently in projects

- demonstrate the ability to present and discuss information, problems and solutions in speech and writing and in dialogue with different audiences

- assimilate literature in English and write a report summary in English
- clarify, document and present their work in a technical report
- good language handling and use of subject terminology
- make a sober and clear oral presentation
- receive and give criticism on own and others ' work

Ability to make judgements and adopt a standpoint

- demonstrate the ability to make assessments informed by relevant disciplinary, social and ethical aspects

- reflect on the economic, political and ethical aspects in connection with technical problems and solutions

- demonstrate insight into the possibilities and limitations of technology, its role in society and the responsibility of the individual for how it is used, including social and economic aspects as well as environmental and occupational health and safety aspects

- working safely in the laboratory and in chemical environments and to manage chemicals properly
- strive for recycling and to economize resources

- demonstrate the ability to identify the need for further knowledge and undertake ongoing development of his or her skills

Extent and content of the programme

Nominal study period is 3 years, which corresponds to 180 credits at basic level.
The programme is given in Swedish.

Eligibility and selection

In order to be accepted to the Degree programme, in Chemical Engineering general eligibility for university studies in Sweden, i.e. completed upper secondary education including documented proficiency in Swedish corresponding to Swedish 3 / Swedish as second language 3 and English corresponding to English 6. In addition this specific requirements must be met:

Upper-secondary school from 1 July 2011 and upper-secondary adult education from 1 July 2012 (Gy2011)

Field-specific entry requirement A8.

Specific entry requirements: Physics 2, Chemistry 1 and Mathematics 3c. Each subject requires at least a Pass grade.

Upper-secondary education before 1 July 2011 and upper-secondary adult education before 1 July 2012

Field-specific entry requirement 8 *.

Specific entry requirements: Mathematics D, Physics B, chemistry A. Each subject requires a grade of Pass or 3.

* For more information about “area of competence”, see www.hsv.se

Implementation of the education

Structure of the education

The study year is normally divided into 4 study periods and two or three courses are taken simultaneously at each period. Teaching and examination methods vary between courses. Normally, a proportion of the course is lectures, which gives an introduction with the concepts and theories. Exercises, seminars and laboratory work enhance the understanding of the theoretical relationship. Projects, based on the industrial model, have an essential role in the education. These projects are designed to improve group skills when working with real-life assignments from an engineering point of view.

In order to create a continuity of the program, collaboration between courses within each study year, as well as between study years, is emphasized. The programme is completed by doing a degree project, which is often carried out with a commission outside the school.

The programme's first year is mainly devoted to courses in mathematics and basic chemistry. During the second year, the courses predominately consist of chemistry subjects. The programme's third year consists of advanced courses in chemistry, chemical engineering and environment. The program includes 13,5 credits elective courses in which students can choose to raise their profile. These courses are normally taken during the programme's third years.

Courses

The programme is course-based. Lists of courses are included in appendix 1.

Grading system

Courses in the first and the second cycle are graded on a scale from A to F. A-E are passing grades, A is the highest grade. The grades pass (P) and fail (F) are used for courses under certain circumstances.

Conditions for participation in the programme

Participation requires admission to courses within the programme and course registration. Course registration is done via the personal menu at www.kth.se

Students, who have been registered on a course and then decide not to pursue the course, must notify that immediately to the teacher who is responsible for the course.

It is each student's responsibility to ensure that prerequisites from previous courses are reached before starting a new course.

Degree project

The program includes a degree project of 15 credits. That means about 10 weeks of full-time studies.

The degree project is the final part of the education. The project work may begin when special admission requirements for the course are fulfilled.

The following apply for the degree project work:

- It may be started after the assignment is approved by the programme director
- It must constitute proof of an independently, engineering-related work summarizing theoretical and/or experimental work with a corresponding written report and oral presentation.
- It can be carried out at a company or at KTH.

The supervisor and examiner are appointed by the programme director.

Degree

Conditions for the Bachelor of Science in Engineering 180 credits

To receive a the ***Bachelor of Science in Engineering*** passing grades, at the lowest P (pass) or E, in all the courses that are included in the student's study plan, are required. The programme is formed so that the student fulfills the national degree requirements and has completed courses corresponding to 180 higher education credits, of which

- mathematical-natural scientific courses of at least 25 credits, and in addition at least 90 credits (including 15 credits of degree project, first level) in the subjects central to the technical area

Appendix 1: Course list

Degree Programme in Chemical Engineering (TIKED)

General courses

Year 1

Mandatory courses (60.0 Credits)

Code	Name	Credits	Edu. level
KH1111	Mathematics	15.0 hp	First cycle
KH1121	Organic Chemistry	9.0 hp	First cycle
KH1122	Analytical Chemistry	7.5 hp	First cycle
KH1123	General Chemistry 1	6.0 hp	First cycle
KH1124	General Chemistry 2	6.0 hp	First cycle
KH1130	Chemical Engineering and Technology 1	7.5 hp	First cycle
KH1150	Engineering Skills	9.0 hp	First cycle

Optional courses

Code	Name	Credits	Edu. level
KH0001	Introductory Course in Mathematics	1.5 fup	Pre-university level
KH0002	Introduction to Chemistry	1.5 fup	Pre-university level
KH1406	Swedish Writing for Engineers	7.5 hp	First cycle
KH1407	Practical Training for the Degree Programme in Chemical Engineering	7.5 hp	First cycle

Supplementary information

Study year 1 consists of mandatory courses.

Year 2

Mandatory courses (60.0 Credits)

Code	Name	Credits	Edu. level
KH1212	Mathematical Statistics	5.0 hp	First cycle
KH1221	Applied Physical Chemistry	5.0 hp	First cycle
KH1222	Applied Chemistry	5.0 hp	First cycle
KH1223	Biotechnology	7.5 hp	First cycle
KH1231	Chemical Engineering and Technology 2	21.0 hp	First cycle
KH1242	Sustainable Development and the Chemical Engineer	6.0 hp	First cycle
KH1251	Electrical Measurements, Control Theory and Practice	6.0 hp	First cycle
KH1252	Business Administration	4.5 hp	First cycle

Optional courses

Code	Name	Credits	Edu. level
KH1406	Swedish Writing for Engineers <i>Continues från study year 1.</i>	7.5 hp	First cycle
KH1407	Practical Training for the Degree Programme in Chemical Engineering	7.5 hp	First cycle

Supplementary information

Study year 2 consists of mandatory courses.

Year 3

Mandatory courses (46.5 Credits)

Code	Name	Credits	Edu. level
KH1324	Analytical Chemistry 2	7.5 hp	First cycle
KH1332	Chemical Engineering and Technology 3	9.0 hp	First cycle
KH1341	Environmental Technology	7.5 hp	First cycle
KH1353	Organisational Development and Leadership for Engineers	7.5 hp	First cycle
KH138X	Degree Project in Chemical Engineering and Technology, First Cycle	15.0 hp	First cycle

Optional courses

Code	Name	Credits	Edu. level
BB1160	Eucaryotic Cell Biology	7.5 hp	First cycle
BB1190	Gene Technology	7.5 hp	First cycle
BB1210	Purification of Biomolecules	6.0 hp	First cycle
KA1015	Chemistry for Sustainable Development	6.0 hp	First cycle
KE2010	Industrial Energy Processes	7.5 hp	Second cycle
KE2070	Transport Phenomena, Advanced Course	7.5 hp	Second cycle
KE2130	Renewable Fuel Production Processes	7.5 hp	Second cycle
KE2351	Risk Analysis and Management for Chemical Engineers	7.5 hp	Second cycle
KF1165	Materials Chemistry and Properties	9.0 hp	First cycle
KH1406	Swedish Writing for Engineers <i>Continues fr�m study year 1 and 2.</i>	7.5 hp	First cycle
KH1407	Practical Training for the Degree Programme in Chemical Engineering	7.5 hp	First cycle
KH1408	Spectroscopic Methods in Organic Chemistry	7.5 hp	First cycle
SF1519	Numerical Methods and Basic Programming	9.0 hp	First cycle

Supplementary information

Study year 3 consists of mandatory courses and elective courses (13,5 hp). Study year 3 ends with a degree project 15 credits.

The course SF1519 Numerical Methods and Basic Programming 9 credits is recommended for students who intend to pursue further studies at one of the masters programme in chemistry that the School of Engineering Sciences in Chemistry, Biotechnology and Health.

Appendix 2: Specialisations

Degree Programme in Chemical Engineering (TIKED)

This programme has no specialisations.
