Programme syllabus

Master's Programme, Environomical Pathways for Sustainable Energy Systems, 120 credits
Masterprogram, miljövänliga energisystem

120.0 credits

Valid for students admitted to the education from autumn 19 (HT - Autumn term; VT - Spring term).

This is a translation of the Swedish, legally binding, programme syllabus.

Programme objectives

In addition to the objectives specified in the Degree Ordinance of the Swedish Higher Education Ordinance, there are also specific objectives for this programme. On completion of this programme, the student shall:

Knowledge and understanding

- Have a broad scientific foundation that enables them to work within the field of energy technology. This should include energy knowledge on sustainable energy systems, energy sources and their use, and an assessment of the technical, economic and environmental implications related to various energy conversion processes.
- Demonstrate broad knowledge within this technical field, including knowledge in mathematics and natural science, and in particular specialised knowledge within certain parts of the field.

Skills and abilities

- Demonstrate a good ability to, independently and in a group, apply knowledge and skills in practical activities while taking into account relevant scientific, professional and social assessments and standpoints.
- Demonstrate a good ability to analyse, formulate and manage technical problems from a systems perspective, with a holistic view of their life cycle, from concept/requirement specification, development, operation and decommissioning, and an ability to set boundaries, determine the necessary use of resources and manage processes for problem-solving and realisation.
- Possess individual and professional skills, such as in the area of language, leadership, project management and communication, to work as an engineer in a management position or as a leader within a technology-intensive company, or to be able to continue towards a research career.

Ability to make judgements and adopt a standpoint

- Have a very good understanding of the fact that engineering problems are often complex, can be incompletely defined and sometimes involve conflicting objectives and conditions.
- Be aware of the responsibilities and ethical considerations that may arise in connection with various technical, organisational, economic, ecological and social processes.

Extent and content of the programme

The programme comprises 120 credits, which corresponds to two years of full-time studies. The programme is in the second cycle and the language of instruction is English.

The Programme is offered within the framework of master’s programmes, the KIC InnoEnergy MSc School.
Partner Universities in the programme Environomical Pathways for Sustainable Energy Systems (SELECT) are:
- KTH – Royal Institute of Technology, Stockholm, Sweden
- Aalto – Aalto University School of Science and Technology, Finland
- TU/e – Eindhoven University of Technology, Netherlands
- PoliTo – Politecnico di Torino, Italy
- UPC – Barcelona Tech
- IST – Instituto Superior Técnico, Portugal
- AGH – AGH University of Science and Technology, Poland

Possible specialisation areas for the programme:

- Specialisations for semester 3 and 4:
  - Sustainable Biomass Processing (Aalto)
  - Innovation in Energy Systems (TU/e)
  - Solar Systems (UPC)
  - Polygeneration (KTH)
  - Energy Efficiency (PoliTo)
  - Sustainable Fuels Economy (AGH)
  - Offshore Energy Systems (IST)

The language of instruction for the programme is English.

**Eligibility and selection**

In order to be eligible to the master’s programme, a relevant higher education degree of at least 180 credits, degree of bachelor in natural science or in engineering, or technical bachelor’s degree preferably within Mechanical Engineering, energy/environmental or Chemical Engineering is required. Other equivalent technical or science degrees on the first level can also give eligibility.

Eligibility may however be assessed as not fulfilled if:

- The degree awarding institution is not considered to meet acceptable quality standards by the authorities of the country in which the institution is located.
- The degree does not qualify for admission to equivalent Master level in the country where the degree is awarded.

Other studies or work experiences are judged on the basis of the actual competences which are referred to.

A sound and documented knowledge of written and spoken English equivalent of TOEFL score minimum 580 (paper) or 92 (internet) and the writing section fulfilling the minimum requirement of 4.5 or 22, respectively; or IELTS score minimum 6.5 and the each section fulfilling the minimum requirement of 5.5; or Cambridge Certificate in Advanced English (CAE) or Cambridge Certificate of Proficiency in English (CPE), minimum grade “C” is required from all applicants.

The selection of students to the programme is performed by the steering committee of the programme, consisting of representatives from all partner universities, and in compliance with the directives given by the KIC InnoEnergy.

All KIC InnoEnergy applications will be handled by Karlsruhe Institute of Technology (KIT).

The selection process is based on the following selection criteria: University, previous studies (for instance GPA, grades in specific subjects and English), motivation for the studies (for instance letter of motivation, references, thesis proposal and relevant work experience). The evaluation scale is 1-75.
Implementation of the education

Structure of the education

The academic year, semesters (terms) and study periods are described by the KTH regulations (www.intra.kth.se/regelverk).

First year is offered as distance education. All KIC InnoEnergy applications will be handled by Karlsruhe Institute of Technology (KIT).

Structure of the programme

The programme extends over four semesters of which the first two, i.e. year 1, are given at either KTH or UPC. The third and fourth semesters, i.e. year 2, is chosen by the students, among the all partner universities (KTH, PoliTo, Aalto, TU/e, UPC, AGH and IST) according to their desired field of specialization, including the area for their MSc thesis. However, the choice must be such that the programme’s mandatory mobility condition is met which, for example, means that a student studying year 1 at KTH MUST choose another university and area of specialization for year 2. In the fourth (final) semester the students can perform the MSc thesis in an industrial setting in common supervision with researchers/teachers from the student’s 2nd year university.

The first two semesters are considered fundamental within the field of sustainable energy systems, and renewable energy. Integrated in the year 1 curriculum is also energy management and introductory business and entrepreneurship training. In the second semester, the first programme spring seminar is given at one of the partner universities.

In this spring seminar, the topic is cutting-edge research in the field. Between the second and third semesters, a Summer Internship is performed where students combine their learning experiences from semesters 1 and 2 to a basic environomical problem in industry. During the third and fourth semesters the partners other than KTH offer courses within eight fields of specialization (see above), along with a common 7 ECTS compulsory course containing advanced environomic material. Also, during the second year the students apply their knowledge on a project in industry or at one of the partner universities to constitute the basis for the master thesis. This includes the second compulsory spring seminar given for one week at one of the partner universities with an advanced discussion on research in the area. The programme ends with a common, degree ceremony at one of the partner universities.

The academic year of higher education at KTH consists of 40 weeks divided in 4 periods followed by one week of examinations.

There are three re-examination-periods, in the beginning of January, June and August. For more information about the Academic Year, http://www.kth.se/student/schema/1.1007?l=en_UK

Courses

The programme is course-based. Lists of courses are included in appendix 1.

The programme is in course form. The course structure is outlined in appendix 1, and they will be further described on the programme website www.exploreseelect.eu.

The student must register for the individual courses in the way each one of the partner universities decides.

Grading system

Courses in the first and the second cycle are graded on a scale from A to F. A-E are passing grades, A is the highest grade. The grades pass (P) and fail (F) are used for courses under certain circumstances.

Since the programme is a result of a cooperation agreement between KTH and four other universities, other types of grading might also be used.

Conditions for participation in the programme

Participation requires admission to courses within the programme and course registration. Course registration is done via personal menu at www.kth.se
For studies at a higher study year there are specific admission requirements for the courses. Admission requirements are specified in the course syllabus.

Application for courses within the programme
Prior to each semester, the student must apply for all courses the student intends to take. Course application is done at www.antagning.se or www.universityadmissions.se

- 1 - 15 May for autumn semester
- 1 - 15 November for spring semester

If the student does not apply via www.antagning.se or www.universityadmissions.se, the application is only considered subject to availability.

The student can obtain information on how to apply from the school's office of student affairs.

In order to be allowed to pass from Semester 1 to Semester 2 the students must have achieved at least 22 credits by the end of the exam period in January and must have attempted to pass all the mandatory assignments (calculations, simulations, laboratory,) present in all courses. At least 80% of the mandatory assignments should have been passed.

To pass from Semester 2 to Semester 3, at least 50 credits should have been achieved by the end of the exam period in August, all mandatory assignments should have been attempted and at least 80% of the assignments should have been passed.

To pass from Semester 3 to Semester 4, at least 80 credits, should have been achieved by the end of the exam period in January, all mandatory assignments should have been attempted and at least 90% of the assignments should have been passed.

Individual study plan
A student who does not fulfil the above requirements must, in consultation with the programme study advisor, establish an individual study plan for the continuing studies. There are no guaranties for full-time studies for students with an individual study plan.

For more information, see the KTH regulatory framework, www.kth.se

Specialisation Selection
There is no limitation to the number of places available at each partner university.

Recognition of previous academic studies
Credits from courses taken at another university/higher education institution both in Sweden and abroad, can, under certain circumstances be counted as part of the program. Students wishing recognition of previous academic studies must submit an application to the Programme Steering Committee.

Reference to Policy for recognition of previous academic studies at the Royal Institute of Technology (KTH Regulations).

The application form can be found on the KTH website.

Degree project
The degree project corresponds to 30 ECTS.

In order to fulfill specific admission requirements for a Degree Project, Second Cycle, 30 credits, courses corresponding to at least 60 credits, second cycle, must be completed. The courses at the second cycle shall include courses in the programme relevant to the degree project, as well as courses in science theory and research methodology.
To start the degree project at least 80 ECTS course credits should have been achieved, all compulsory assignments should have been attempted and at least 90% of theses assignments should have been passed (as described under "Term enrolment" above).

In order to fulfil requirements for obtaining a master degree the project must be part of the required in-depth studies at second level in the main field of study for the programme. The topic of the project must be accepted by the Programme Steering Committee.

The project can be performed either at an industry, community, agency or at one of the partner universities.

The partner universities might have special requirements for the degree project.

Reference to rules for the degree project at the Royal Institute of Technology (KTH Regulations).

Degree

The student must apply for a certificate. Applications are made by logging on to the KTH website where "Applications for degrees" is found under the heading Programme.

Conditions for a Degree of Master, 120 credits

A Degree of Master of Science is obtained after completing the degree programme. The programme is designed so that the student, when they graduate, has fulfilled the national qualification requirements with a passing grade in all courses included in the student's study plan of 120 credits, of which

- at least 90 credits are attained in the second cycle, which includes at least 60 credits (including a 30 credit degree project) of specialised studies within the programme's main field of study.

Title of general qualification at second cycle

Degree of Master of Science (120 credits)
Teknologie masterexamen

Refer to the KTH guidelines (KTH regulatory framework), local directions for higher education qualifications at first and second cycle, the local Degree Ordinance www.kth.se

Depending on the chosen track of studies, a double degree may be issued from one of the partner universities.

### Supplementary information

Course list information is based upon the curriculum for academic year 2019/2020, changes may occur.

MJ2504 "Integrated project of the year in sustainable energy" 6 credits must be taken by all students admitted to TMESM regardless "study track"/partner University. (period 1-4)
Appendix 2: Specialisations

Master's Programme, Environomical Pathways for Sustainable Energy Systems, 120 credits (TMESM), Programme syllabus for studies starting in autumn 2019

This programme has no specialisations.
