Programme syllabus

Master's Programme, Macromolecular Materials, 120 credits
Masterprogram, makromolekylära material
120.0 credits

Valid for students admitted to the education from autumn 12 (HT - Autumn term; VT - Spring term).

This is a translation of the Swedish, legally binding, programme syllabus.

Programme objectives

Knowledge and understanding
To receive a Degree of Master of Science in Macromolecular materials, the students should:

- demonstrate general knowledge and understanding of properties and use of different materials.
- demonstrate in-depth knowledge on the relationships between the structure and properties of macromolecular materials as well as synthesis/modification, characterization, processing and applications of polymer and/or fibre-based materials.
- have insight into current researchfront in macromolecular materials.

Skills and abilities
To receive a Degree of Master of Science in Macromolecular materials, the students should:

- demonstrate the ability to identify, formulate and manage current and real material related problems drawn from industry, society and research, taking into account the potential and limitations.
- demonstrate the ability to make assessment of the reasonableness of the obtained solutions, and compare and evaluate alternative solutions.
- demonstrate laboratory skills and knowledge of safe chemical managing, and the ability to implement and evaluate material related experiments on a laboratory scale.
- demonstrate the ability to orally and in writing present and discuss ideas and outcomes.

Ability to make judgements and adopt a standpoint
To receive a Degree of Master of Science in Macromolecular materials, the students should:

- demonstrate the ability to critically review the literature and technologies in areas related to materials chemistry and particularly polymer and fibre-based materials.
- demonstrate the ability to take a stand on issues of ethical nature in their professional field.
- demonstrate an understanding for the fact that material related problems can be complex, incompletely defined and contain contradictory conditions.
- demonstrate the ability to rapidly acquire knowledge in new areas and to apply new knowledge for innovation and development of materials and related processes.
Extent and content of the programme

Macromolecular Materials is a two-year (120 credits) master programme, second cycle. The instruction language is entirely English. The programme consists of courses given by KTH, mainly by the School of Chemical Science and Engineering.

Eligibility and selection

General admission requirements

A completed Bachelor's degree - corresponding to a Swedish Bachelor's degree (180 credits), or equivalent academic qualifications from an internationally recognized university.

Language requirements – applicants must proof their proficiency in English, which is most commonly established through an internationally recognized test.

Documentation – for detailed information about list of required documents, see “Admission requirements and selection”

Specific admission requirements

In order to be admitted to the Macromolecular Materials programme, a Bachelor's degree in Chemistry or closely related subject, of 180 credits, including the following is required:

- Courses in chemistry or closely related subject for at least 75 credits.
- Basic knowledge in mathematics for at least 20 credits.
- Basic knowledge in numerical analysis/computer science for at least 9 credits.

For more information, see Study at KTH, Master’s programmes at KTH, “Admission requirements”

Selection process

The selection process for the Macromolecular Materials programmes based on a total evaluation of the following selection criteria: university, grade point average (GPA), courses relevant to the programme, motivation letter, relevant work experience, list of qualifications for specific requirements and English proficiency.

Complete information on the eligibility requirements can be found in the local admission policy of KTH, see:

Implementation of the education

Structure of the education

The academic year has a duration of 40 weeks. The academic year at KTH is divided into four periods. Each period lasts approximately seven weeks and is followed by an examination period.

The programme consists of courses for 90 credits courses followed by a degree project, advanced level of 30 credits. Two mandatory courses (15 credits) are included in the first year, and remaining courses may be chosen from a list of 25 courses. Within this list 5 courses are regarded as particularly important, and the student is required to choose at least 3 of these 5. This gives the student a great opportunity to create his/her own curriculum. Guidelines and recommendations for course combinations will be given. Courses corresponding to 15 credits can be elected freely outside the course list.
Courses
The programme is course-based. Lists of courses are included in appendix 1.

The programme consists of mandatory, conditionally elective, recommended and elective courses. The goals, prerequisites, contents and examination requirements of different courses can be found in the respective course plans.

Two or three courses are usually studied in parallel during each period. Teaching and examination methods vary between the courses. Normally the course contains lectures, which give an introduction to the concepts and theory. Exercises, seminars, laboratory work and project assignments deepen the conceptual understanding, give practical experience and give possibility to practice the group skills.

Grading system
Courses in the first and the second cycle are graded on a scale from A to F. A-E are passing grades, A is the highest grade. The grades pass (P) and fail (F) are used for courses under certain circumstances.

Conditions for participation in the programme
Students accepted to the programme will start the programme at the end of August when the registration also takes place. The student must register in person. The students are thereafter required to make a study registration and course selection for the coming term no later than November 15 and May 15 each academic year, respectively. At least 45 credits have to be completed during the first academic year (including the re-examination period in August) in order for the student to be promoted to the second year of the programme.

Students who have not passed 45 credits in the first year, must contact the educational coordinator for an individual study plan. This study plan will include residual courses and appropriate courses for the upcoming year. The student who has not done this will not be registered on any courses in the upcoming academic year.

Recognition of previous academic studies
Under certain circumstances, and in agreement with the programme coordinator, credits for previous studies can be received according to the local policy of KTH.

For more information see:

Studies abroad
For information about studies abroad, contact the international coordinator at the School of Chemical Science and Engineering

Degree project
Students admitted to the programme are required to perform an individual study in the form of a degree project, advanced level, corresponding to 30 credits. This means 20 weeks of fulltime studies. The main portion of the studies must generally be completed before the degree project work can be started. At least 60 credits must be completed where 30 credits in the second cycle within the main field of study.

The purpose of the thesis project is that the student demonstrates the ability to perform independent project work, using the skills obtained from the courses in the programme. It is the student's responsibility to find a suitable thesis project, with assistance from KTH.

Degree project, advanced level for the Degree of Master of Science, Macromolecular Materials, can be performed in the following exam topics:
Fibre and Polymer Technology, Chemistry, Chemical engineering.
Other degree projects in related fields may also be allowed, but need approval by the Director of Undergraduate and Masters’ studies at the School of Chemical Science and Engineering. For more information, contact the study advisor at the CHE students office.

More information on the KTH policy on the degree project can be found at: http://intra.kth.se/en/regelverk/utbildning-forskning/grundutbildning/examensarbete/overgripande-regler-och-riktlinjer-for-examensarbete-30-hogskolepoang-for-masterexamen-120-hogskolepoang-samt-betygssattning-av-examensarbete-1.27212

Degree

Master of Science (120 credits) - is obtained after completion of the Master (Two Years), Macromolecular Materials study programme. The programme is designed so that students, when they graduate, have fulfilled national requirements for a degree and have completed courses comprising 120 credits, of which:

- At least 90 credits are at second cycle, of which at least 60 higher education credits (including a 30-credits degree project) with in-depth studies in the main field of study.

Students who fulfill all the requirements will be awarded a Master of Science (120 credits). Students must apply for the degree and also show proof of their basic degree (Bachelor or similar).

Supplementary information
Study year 1 consists of two mandatory courses, at least three of the conditionally elective courses and recommended courses.

The courses KF2110 and AK2036 are mandatory courses for all students admitted to the program, except students admitted to program with a background at the Degree Programme in Materials Design and Engineering (CMATD), which instead must follow the courses: KD1090 and AK2036.

Year 2
Recommended courses

Supplementary information
This is a preliminary list of courses for study year 2 for those who started the program 2012. There might be changes. For a correct updated list, see the study handbook for the respective study year.

Study year 2 consists of recommended courses and a mandatory degree project, second level, 30 higher education credits.
(See listed degree projects, below)

Degree Project in Wood Chemistry KF201X
Degree Project in Paper Technology KF202X
Degree Project in Fiber Technology KF203X
Degree Project in Pulp Technology KF204X
Degree Project in Polymer Technology KF205X
Degree Project in Polymeric Materials KF206X
Degree Project in Surface Coating Tec. KF207X
Degree Project in Chemical Engin. KE202X
