

Utbildningsplan

En tillgänglighetsanpassad version av utbildningsplanen finns i Kurs- och programkatalogen.

Masterprogram, teknisk mekanik 120 hp

Master's Programme, Engineering Mechanics, 120 credits

Gäller för antagna till utbildningen fr o m HT14.

Utbildningens mål

Engineering Mechanics is an important part of the design process for a large range of products. As requirements become more complex and challenging, the demand for engineers trained to deal with advanced mechanical problems is increasing. The objective of the programme is to encourage and enable students to learn advanced topics in Engineering Mechanics. The programme is well balanced between theoretical studies and practical applications and thus provides a platform for a successful career in industry or continuation towards a PhD.

Kunskap och förståelse

A master of science in Engineering Mechanics will:

- have the ability to independently apply mathematics and basic engineering science in the field of engineering mechanics.
- have the ability to master and apply principles in the field of engineering mechanics.

- be able to be creative and critical in order to formulate and investigate mechanical problems using modern methods and tools.

Färdigheter och förmågor

A master of science in Engineering Mechanics will:

- have the ability to critically and systematically analyse, judge and handle complex mechanical problems and situations even with access to limited information.
- have the ability to critically, independently and creatively formulate problems and to plan and perform work within given time limits.
- have the ability to, both orally and in writing, communicate and discuss conclusions and the underlying theory and argumentation.
- be able to follow the latest development and research and have the ability to participate in research and development work in the field of engineering mechanics.
- communicate results and conclusions in a competent and intelligible manner, both orally and in writing.

Värderingsförmåga och förhållningssätt

A master of science in Engineering Mechanics will:

- have the ability to make decisions in the field of engineering mechanics regarding research and development work based on relevant scientific, societal and ethical aspects.
- show insight regarding the possibilities and limitations of engineering science and its role in the society.
- have ability to identify the need for further knowledge in the field and take responsibility for keeping the personal knowledge up to date.

Complete information on degree requirements can be found at the local degree policy of KTH:

<http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning/examina/1.27227>

Utbildningens omfattning och innehåll

Engineering Mechanics is a two-year (120 ECTS) master programme on the advanced level (second cycle) and starts in the end of August each year. The programme is composed of three two-year tracks: Fluid Mechanics, Solid Mechanics and Sound and Vibration. The language of the programme is English.

Behörighet och urval

General eligibility requirements

A completed Bachelor's degree, corresponding to a Swedish Bachelor's degree (180 ECTS), or equivalent academic qualifications from an internationally recognised university. Students in their final year of undergraduate education may also apply to KTH and if qualified, receive a conditional acceptance.

Specific eligibility requirements

Documented English proficiency according to:

http://www.kth.se/studies/programmes/master/admission?l=en_UK

The applicant must have a basic degree, Bachelor's or similar, from a mechanical, aeronautical engineering, engineering physics, or similar programme with sufficient theoretical depth and good academic results. The specific requirements may be assessed as not fulfilled if:

1. the average grade is in the lower third on the grading scale used (above pass level).
2. the degree awarding institution is not considered to meet acceptable quality standards.
3. the degree does not qualify for admission to equivalent Master level in the country where the degree is awarded.

Selection process

The selection process is based on a total evaluation of the following criteria: University, grades in courses relevant to the programme: mathematics, mechanics, physics, solid mechanics, fluid mechanics and sound and vibration, and motivation letter. In addition, English language skills above the minimum requirements will give a higher overall evaluation score.

Utbildningens genomförande

Utbildningens upplägg

The academic year at KTH is divided into four periods. Each period lasts approximately seven weeks with at least 33 days of study. Each period is followed by an examination period. In addition to the four regular exam periods, there are three additional re-examination periods: after Christmas, after May and immediately preceding the first study period of the academic year. The academic year has duration of 40 weeks. Teaching activities may, if necessary, be scheduled outside the academic year.

The first two periods in the first year of the programme are mainly dedicated to the compulsory courses within each track: Fluid Mechanics, Solid Mechanics or Sound and Vibration. The third and fourth periods mainly contain elective courses within or outside the chosen track. The second year mainly consists of elective courses and the final degree project.

Kurser

Utbildningen sker i kursform. Kurslistor finns i bilaga 1.

The programme is course-based and the course part corresponds to 90 ECTS (the thesis is 30 ECTS). Each track starts with basic courses, which must be selected if equivalent courses are not included in the student's Bachelor's degree. The basic courses for each track are listed in Appendix 1. The compulsory courses correspond to between 21.5 and 37.5 ECTS depending on track. This leaves between 52.5 and 68.5 ECTS for elective courses. The first part of the elective courses must be on the advanced level and selected from the list of courses in Appendix 1. Together with the compulsory courses, the first part of the elective courses shall add up to at least 70 ECTS. The choice of elective courses from the list in Appendix 1 is not completely free, because each track has a pool of four to six courses and at least one of these recommended courses must be selected. The remaining second part of the elective courses, at most 20 ECTS, does not need to be selected from the course list in Appendix 1, but an elective course may not be similar to a course already completed in a previous degree.

The list of compulsory and elective courses is given in appendix 1.

Betygssystem

För kurser på KTH används en sjugradig målrelaterad betygsskala A-F som slutbetyg för kurser på grundnivå och avancerad nivå. A-E är godkända betyg med A som högsta betyg. Betygen godkänd (P) och underkänd (F) används som slutbetyg då särskilda skäl föreligger.

The courses and the Master's thesis are graded on a scale from A to F. A-E are passing grades, A is the highest grade. The grades pass (P) and fail (F) are used for courses under certain circumstances.

Villkor för deltagande i utbildningen

No later than November 15 and May 15 each academic year, respectively, the students are required to make a study registration and course selection for the coming term. At least 45 ECTS have to be completed during the first academic year, including the re-examination period in August, in order for the student to be promoted to the second year of the programme. After being registered to the programme, each student shall select one of the three tracks: Fluid Mechanics, Solid Mechanics or Sound and Vibration. Change of track is not recommended after September 15 in the first period of the first term. Courses are selected through <http://www.universityadmissions.se> and you may not have more than 127 ECTS in your transcript of records at the time of graduation.

Tillgodoräknanden

Under certain circumstances, and in agreement with the director of the selected track, credits for previous studies can be received according to the local policy of KTH: <http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning/prestationer/1.27200>

Utlandsstudier

Under special circumstances and after approval by the programmedirector, compulsory and elective courses may be taken at other universities. For this, a Learning Agreement must be created and signed by the programme director before you start your studies abroad. For example, the Sound and Vibration track is currently participating in the NINA cooperation with Chalmers and NTNU providing the possibility for students to take elective courses at the other participating universities.

Examensarbete

Students admitted to the programme are required to perform an independent study in the form of a thesis project corresponding to 30 university credits. To begin the thesis project, a student must have completed at least 60 university credits of the total course work. The purpose of the thesis project is that the student should demonstrate the ability to perform independent project work, using and developing the skills obtained from the courses in the programme. The thesis project can either be performed at a university or, more commonly, at a company. The student must actively search for a suitable thesis project in industry; however KTH will provide some assistance with information on suitable points of contact. The thesis project will be graded on a scale from A to F, where A-E are passing grades and A is the highest grade.

More information on the KTH policy on the degree project can be found at <http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning/examensarbete/1.27212>

Examen

Students who fulfill all the requirements of the programme will be awarded the Degree of Master of Science in Engineering Mechanics (two years). Students must apply for the degree and also show proof of their basic degree (Bachelor or similar). Complete information on the degree requirements can found at the local degree policy of KTH: <http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning/examina/1.27227>

The application form for the degree is found at the personal menu at www.kth.se.

Bilaga 1 - Kurslista

Bilaga 2 - Inriktningsbeskrivningar

Bilaga 1: Kurslista

Masterprogram, teknisk mekanik (TTEMM)

Gemensamma kurser

Årskurs 1

Obligatoriska kurser (7,5 Högskolepoäng)

Kurskod	Namn	Omfattning	Utbildningsnivå
AK2030	Vetenskapsteori och vetenskaplig metodik (naturvetenskap)	4,5 hp	Avancerad nivå
SG2128	Forskningsmetodik i teknisk mekanik	3,0 hp	Avancerad nivå

Villkorligt valfria kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SD2111	Teknisk akustik	6,0 hp	Avancerad nivå
SD2125	Signaler och mekaniska system	6,0 hp	Avancerad nivå
SD2140	Strukturakustik	8,0 hp	Avancerad nivå
SD2150	Experimentell strukturdynamik, projektkurs	9,0 hp	Avancerad nivå
SD2155	Strömningsakustik	6,0 hp	Avancerad nivå
SD2165	Akustiska mätningar	8,0 hp	Avancerad nivå
SD2170	Energimetoder	6,0 hp	Avancerad nivå
SD2175	Numeriska metoder för akustik och vibrationer	9,0 hp	Avancerad nivå
SE1025	FEM för ingenjörstillämpningar <i>Ges på engelska i per 1 och svenska i per 3</i>	6,0 hp	Grundnivå
SE2121	Biomekanik	9,0 hp	Avancerad nivå
SE2123	Hållfasthetsteknisk provning	6,0 hp	Avancerad nivå
SE2126	Materialmekanik	9,0 hp	Avancerad nivå
SE2128	Beräkningsteknisk materialmekanik	7,5 hp	Avancerad nivå
SE2129	Brottmekanik och utmattning	9,0 hp	Avancerad nivå
SE2132	Tillämpad elasticitet med FEM	9,0 hp	Avancerad nivå
SE2134	Dynamik inom hållfasthetsläran	7,5 hp	Avancerad nivå
SE2135	Utmattning, tillförlitlighet och dimensionering	9,0 hp	Avancerad nivå
SE2142	Kontaktmekanik	9,0 hp	Avancerad nivå
SE2151	Pappersmekanik	9,0 hp	Avancerad nivå
SG2211	Fordonsaerodynamik	6,0 hp	Avancerad nivå
SG2212	Strömningsmekaniska beräkningar	7,5 hp	Avancerad nivå
SG2214	Strömningsmekanik	7,5 hp	Avancerad nivå
SG2215	Kompressibel strömning	7,5 hp	Avancerad nivå
SG2218	Turbulens	7,5 hp	Avancerad nivå
SG2221	Vågrörelser och hydrodynamisk stabilitet	7,5 hp	Avancerad nivå
SG2222	Mikroströmning	4,5 hp	Avancerad nivå
SG2224	Tillämpade strömningsmekaniska beräkningar	5,0 hp	Avancerad nivå
SG2225	Strömningsmekanik fortsättningskurs	4,0 hp	Avancerad nivå
SG2860	Modellering i FEM	8,0 hp	Avancerad nivå

Kompletterande information

Obligatoriska kurser + rekommenderade kurser + villkorligt valfria = minst 70 hp.

OBS: ej för Hållfasthetsteknik. För spåret i hållfasthetsteknik gäller att obligatoriska kurser + minst en av de rekommenderade kurserna på spåret ska läsas i åk 1 eller 2.

Studenter som läst SG1215 ska läsa SG2225 i stället för SG2214.

Årskurs 2

Obligatoriska kurser (7,5 Högskolepoäng)

Kurskod	Namn	Omfattning	Utbildningsnivå
AK2030	Vetenskapsteori och vetenskaplig metodik (naturvetenskap)	4,5 hp	Avancerad nivå
SG2128	Forskningsmetodik i teknisk mekanik	3,0 hp	Avancerad nivå

Villkorligt valfria kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SD2111	Teknisk akustik	6,0 hp	Avancerad nivå
SD2125	Signaler och mekaniska system	6,0 hp	Avancerad nivå
SD2165	Akustiska mätningar	8,0 hp	Avancerad nivå
SD2180	Ickelinjär akustik	6,0 hp	Avancerad nivå
SD2190	Fordonsakustik och vibrationer	6,0 hp	Avancerad nivå
SE2119	Finit element-metod, projekt	3,0 hp	Avancerad nivå
SE2126	Materialmekanik	9,0 hp	Avancerad nivå
SE2132	Tillämpad elasticitet med FEM	9,0 hp	Avancerad nivå
SE2135	Utmattning, tillförlitlighet och dimensionering	9,0 hp	Avancerad nivå
SE2151	Pappersmekanik	9,0 hp	Avancerad nivå
SG2010	Projektkurs i teknisk mekanik	15,0 hp	Avancerad nivå
SG2150	Stelkroppsdyamik	7,0 hp	Avancerad nivå
SG2214	Strömningsmekanik	7,5 hp	Avancerad nivå
SG2218	Turbulens	7,5 hp	Avancerad nivå
SG2219	Kompressibel strömning, avancerad kurs	7,5 hp	Avancerad nivå
SG2221	Vågrörelser och hydrodynamisk stabilitet	7,5 hp	Avancerad nivå
SG2225	Strömningsmekanik fortsättningskurs	4,0 hp	Avancerad nivå
SG2226	Strömningsmekanik för vindenergi	6,0 hp	Avancerad nivå
SG2804	Människans rörelsemekanik	7,0 hp	Avancerad nivå
SG2860	Modellering i FEM	8,0 hp	Avancerad nivå
SG2870	Icke - linjära finita elementmetoder	7,0 hp	Avancerad nivå

Kompletterande information

Obligatoriska kurser + rekommenderade kurser + villkorligt valfria = minst 70 hp.

OBS: ej för Hållfasthetsteknik. För spåret i hållfasthetsteknik gäller att obligatoriska kurser + minst en av de rekommenderade kurserna på spåret ska läsas i åk 1 eller 2.

Studenter som läst SG1215 ska läsa SG2225 i stället för SG2214.

Spår, fluidmekanik (TEMA)

Årskurs 1

Obligatoriska kurser (44,0 Högskolepoäng)

Kurskod	Namn	Omfattning	Utbildningsnivå
SG1215	Strömningsmekanik *	4,0 hp	Grundnivå
SG1220	Teknisk strömningsmekanik *	6,0 hp	Grundnivå
SG2212	Strömningsmekaniska beräkningar	7,5 hp	Avancerad nivå
SG2214	Strömningsmekanik	7,5 hp	Avancerad nivå
SG2215	Kompressibel strömning	7,5 hp	Avancerad nivå
SG2218	Turbulens	7,5 hp	Avancerad nivå
SG2225	Strömningsmekanik fortsättningskurs <i>För studenter som läst SG1215</i>	4,0 hp	Avancerad nivå

Rekommenderade kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SD2155	Strömningsakustik	6,0 hp	Avancerad nivå
SE1025	FEM för ingenjörstillämpningar <i>Ges på engelska i per 1 och på svenska i per 3</i>	6,0 hp	Grundnivå

Kompletterande information

Minst en av de rekommenderade kurserna i åk 1 och 2 ska läsas.

*SG1220 och SG1215 räknas som baskurser. För de som inte läst motsvarande ska en läsas.

Studenter som läst SG1215 ska läsa SG2225 i stället för SG2214.

Årskurs 2

Rekommenderade kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SD2180	Ickelinjär akustik	6,0 hp	Avancerad nivå
SE2126	Materialmekanik	9,0 hp	Avancerad nivå
SE2132	Tillämpad elasticitet med FEM	9,0 hp	Avancerad nivå

Kompletterande information

Minst en av de rekommenderade kurserna i åk 1 och 2 ska läsas.

Spår, hållfasthetsteknik (TEMB)

Årskurs 1

Obligatoriska kurser (32,0 Högskolepoäng)

Kurskod	Namn	Omfattning	Utbildningsnivå
SE1025	FEM för ingenjörstillämpningar <i>För den som inte läst motsvarande kurs</i>	6,0 hp	Grundnivå
SE2126	Materialmekanik	9,0 hp	Avancerad nivå
SE2132	Tillämpad elasticitet med FEM	9,0 hp	Avancerad nivå
SG2860	Modellering i FEM	8,0 hp	Avancerad nivå

Rekommenderade kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SD2140	Strukturakustik	8,0 hp	Avancerad nivå
SD2150	Experimentell strukturdynamik, projektkurs	9,0 hp	Avancerad nivå

Kompletterande information

Minst en av de rekommenderade kurserna i åk 1 och 2 ska läsas.

Årskurs 2

Rekommenderade kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SD2125	Signaler och mekaniska system	6,0 hp	Avancerad nivå
SG1220	Teknisk strömningsmekanik	6,0 hp	Grundnivå
SG2150	Stelkroppsdyamik	7,0 hp	Avancerad nivå
SG2214	Strömningsmekanik	7,5 hp	Avancerad nivå
SG2225	Strömningsmekanik fortsättningskurs	4,0 hp	Avancerad nivå
SG2870	Icke - linjära finita elementmetoder	7,0 hp	Avancerad nivå

Kompletterande information

Minst en av de rekommenderade kurserna i åk 1 och 2 ska läsas.

Studenter som läst SG1215 ska läsa SG2225 i stället för SG2214.

SG1220 läses ej av den som redan läst grundkurs i strömningsmekanik.

Spår, ljud och vibrationer (TEMC)

Årskurs 1

Obligatoriska kurser (35,0 Högskolepoäng)

Kurskod	Namn	Omfattning	Utbildningsnivå
SD1116	Konstruktion av tysta och vibrationsfria maskiner *	6,0 hp	Grundnivå
SD1120	Ljud och vibrationer *	9,0 hp	Grundnivå
SD2125	Signaler och mekaniska system *	6,0 hp	Avancerad nivå
SD2140	Strukturakustik	8,0 hp	Avancerad nivå
SD2155	Strömningsakustik	6,0 hp	Avancerad nivå

Rekommenderade kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SE2123	Hållfasthetsteknisk provning	6,0 hp	Avancerad nivå
SG2211	Fordonsaerodynamik	6,0 hp	Avancerad nivå
SG2215	Kompressibel strömning	7,5 hp	Avancerad nivå
SG2860	Modellering i FEM	8,0 hp	Avancerad nivå

Kompletterande information

*SD1116, SD1120 och SD2125 räknas som baskurser. För de som inte läst motsvarande ska en läsas.

Minst en av de rekommenderade kurserna i åk 1 och 2 ska läsas.

Årskurs 2

Rekommenderade kurser

Kurskod	Namn	Omfattning	Utbildningsnivå
SE2126	Materialmekanik	9,0 hp	Avancerad nivå
SE2132	Tillämpad elasticitet med FEM	9,0 hp	Avancerad nivå

Kompletterande information

Minst en av de rekommenderade kurserna i åk 1 och 2 ska läsas.

Bilaga 2: Inriktningar

Masterprogram, teknisk mekanik (TTEMM)

Spår, fluidmekanik (TEMA)

Mechanics of solids, fluids and gases are fundamental areas within classical physics and plays a pivotal role in the design and analysis in almost every branch of engineering science. Today, this position is enhanced by even larger amount of the areas engulfed by the subject. For instance, chemical and material sciences in combination with fluid mechanics lead to a deeper understanding of various physical phenomena and also lead to new technical innovations. The courses in fluid mechanics, turbulence, compressible flow, computational fluid dynamics and vehicle aerodynamics provide a stable platform for solving complex fluid mechanics problems in industry or performing research towards a PhD. The Fluid Physics and Applied Fluid Mechanics Laboratory is a part of the Department of Mechanics where both experimental and computational projects of various fluid dynamical systems are carried out. The Linné FLOW Centre is an environment for fundamental research in fluid mechanics, with research projects integrating experiments, computations and theory and combining expertise in stability and transition, flow control, turbulence and geophysical flows, micro-fluid flows, aero-acoustics and numerical analysis.

Spår, hållfasthetsteknik (TEMB)

Solid Mechanics can be seen as a link between material science and applied mechanics with more focus on the latter. Solid Mechanics deals with the mechanical behaviour of materials and structures. The research at the Department of Solid Mechanics covers computational, fracture, composite, contact, material, bio and paper mechanics as well as reliability and fatigue. A primary goal of this research is to develop methods for reliable design of structures, material systems and processes. The Department of Solid Mechanics is host for the Biofibre Material (BiMaC) Excellence Centre and the Forest Products Industry Research College (FPIRC). The research within the field of solid mechanics at the Department of Mechanics is focused on the behavior biomechanical systems. The track in Solid Mechanics is composed of fundamental and advanced courses.

Spår, ljud och vibrationer (TEMC)

Noise and vibration are important issues in modern society. Applications of technical acoustics cover an extremely wide field, from applied mathematics and mechanics to measuring techniques plus signal processing down to motors, transport and building technology. The Marcus Wallenberg Laboratory for Sound and Vibration Research (MWL) is a part of the Department of Aeronautical and Vehicle Engineering and is the largest university centre in northern Europe in the area of sound and vibration research. The track in Sound and Vibration introduces acoustics as an integrated element of engineering with a particular bearing on mechanics, fluid dynamics and solid mechanics. The contents of the courses cover a wide area within sound and vibration control. Included are fundamental principles on sound and vibration generation, transmission and reduction in complex structures, with coupling between vibrating structures and surrounding media, such as gases and liquids.
